

**AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions and listings of claims in the application:

**LISTING OF CLAIMS:**

1. (Previously Presented): A portable terminal device comprising:  
  
a case;  
  
a light emitting section within the case;  
  
a window section formed in a surface of the case; and  
  
a wiring board located in the case, the light emitting section being positioned above a surface of the wiring board,  
  
wherein the light emitting section has a light emitting surface directed in a direction that is at an angle greater than zero degrees to the surface of the wiring board above which the light emitting section is positioned.
2. (original): The portable terminal device according to claim 1, wherein the light emitting section is attached to the wiring board.
3. (Previously Presented): The portable terminal device according to claim 1, further comprising a space section in the case, wherein the space section is an oblong space.

4. (Previously Presented): The portable terminal device according to claim 1, further comprising a space section in the case, wherein the light emitting section is disposed in the space section.

5. (original): The portable terminal device according to claim 1, wherein the light emitting section emits at least any one of red, green, and blue light beams.

6. (Previously Presented): The portable terminal device according to claim 1, wherein the light emitting section is a light emitting diode of a side emitting type.

7. (Previously Presented). The portable terminal device according to claim 1, wherein the light emitting section is a light emitting diode of a surface emitting type.

8. (original): The portable terminal device according to claim 1, wherein the window section is translucent.

9. (original): The portable terminal device according to claim 1, wherein the window section is creamy white.

10. (Previously Presented): The portable terminal device according to claim 1, wherein the light emitting section includes a means for emitting light when a call arrives at the portable terminal device.

11. (currently amended): A portable terminal device comprising:

a case;

a window section formed in a surface of the case;

a light mixing space having a plurality of surfaces within the case, ~~at least a portion of~~  
~~said light mixing space being substantially adjacent~~ in a first direction to the window section;  
and

a light emitting section positioned such that ~~a substantial portion of the emitted light is~~  
emitted in a second direction different from the first direction ~~directly impinges on at least one of~~  
~~the plurality of surfaces of the light mixing space.~~

12. (currently amended): The portable terminal device according to claim 11, wherein the light emitting section is located ~~substantially~~ above a wiring board within the case and the light mixing space is located ~~substantially~~ between the window section and an edge of the wiring board.
